

On July 22, 2021, the New Jersey Department of Environmental Protection (NJDEP) enacted the Lead Service Line Replacement Legislation. It requires all water systems that have lead water services to provide the NJDEP with a written inventory of the water customers that are most-likely to be serviced by a water line that is at least partially made of lead.

The Matawan Department of Public Works has completed and submitted this inventory to the NJDEP. We are also required to publish this list on our website and to provide written notification via certified U.S. Mail to all the involved customers no later than February 21, 2022.

Customers with additional questions about the list may contact the water superintendent by dialing 732-566-3898, extension 635.

Lead

| Service Location | Composition | Service Location | Owned By |
|------------------|-------------|---------------------------------------|------------------|
| 914 HIGHWAY 34 | Lead | Between the Water Main and Curb Valve | Water Department |
